REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: The prior art of record does not disclose or suggest a process for kinetically separating a light hydrocarbon mixture by using a zeolite adsorbent comprising 8-member rings of tetrahedra wherein the zeolite adsorbent has been dealuminated and contains alkali metal cations balancing a framework charge and has a $\text{SiO}_2/\text{Al}_2\text{O}_3$ molar ratio greater than about 80 and less than 180 and having diffusion rate at least 50 times greater for the first component as compared to the second component.

Olson (U.S 6,488,741) teaches a zeolite having a $\text{SiO}_2/\text{Al}_2\text{O}_3$ molar ratio at least about 200. However, throughout the reference, a $\text{SiO}_2/\text{Al}_2\text{O}_3$ molar ratio greater than 500 to greater 2,000 was used. Therefore, it is not obvious to use a $\text{SiO}_2/\text{Al}_2\text{O}_3$ molar ratio less than 200. Also applicants show unexpected results regarding the use of a $\text{SiO}_2/\text{Al}_2\text{O}_3$ molar ratio in the range of about 80 to less than 180.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tam M. Nguyen whose telephone number is (571) 272-1452. The examiner can normally be reached on Monday through Thursday.
